The Urban Water Engineering and Management (UWEM) programme is jointly offered by the Asian Institute of Technology (AIT) and UNESCO–IHE Institute of Water Education (UNESCO-IHE). The UWEM programme is a Joint Master’s degree programme.

Students who successfully complete this programme will be awarded Master degree in Urban Water Engineering and Management.

The world is increasingly urbanized with 50% of the world’s population living in urban areas. By 2030 in Asia, 54% will live in cities compared to 39% in 2005. This enormous growth of urban areas poses several challenges, such as delivery of essential water and sanitation services and the management of the urban water cycle. This is also recognized by the Millennium Development Goals and Targets established at the UN Millennium Summit in 2000. These challenges are further complicated due to climate change, and it is foreseen that coping with them requires a substantial increase of highly trained and qualified human resources.

The Urban Water Engineering and Management Programme offer students the possibility to study in Bangkok, Thailand, and in Delft, the Netherlands, at two renowned institutes for international postgraduate education: AIT and UNESCO–IHE.

The coursework part of the programme starts at AIT in Bangkok in August, where students follow a number of courses until the second half of December. In early January, they move to Delft where they join students in UNESCO-IHE’s Urban Water and Sanitation programme for five modules and international field trip, and start with writing their MSc research thesis proposal. Students then move back to Bangkok for their individual thesis research work.

The target group for this programme is professionals from urban water and wastewater authorities, urban development ministries/authorities, water and environment ministries, private companies, academia, NGOs and city and municipal authorities dealing with or interested in water and sanitation services and managing the urban water cycle.

Candidate with a bachelor’s degree preferably in Civil, Environmental or Water Resources Engineering or related fields are eligible to apply. In principle, candidates should have a minimum of three years of practical or research experience since graduation. All applications are, however, considered on their individual merits. Since instruction and examinations are given in English, it is essential that participants have a good working knowledge of the English language. If there is any doubt about a candidate’s proficiency in English, he or she will be required to take one of the internationally recognized language tests before confirmation of admittance.

For admission to the UWEM programme you can apply to either UNESCO-IHE or AIT. For UNESCO-IHE, you have to apply online. At the UNESCO-IHE website there is a link to apply online.

For AIT, you can download the application form from the website of AIT: http://www.ait.asia/admissions/application.html and submit the completed form with required documents. Alternatively, you can also submit your application online from the same website. Please mention clearly that you are applying for the joint master’s degree programme on Urban Water Engineering and Management (UWEM).

The Asian Institute of Technology promotes technological change and sustainable development in the Asia-Pacific region through higher education, research and outreach.

Established in Bangkok in 1959, AIT has become a leading regional postgraduate institution and is actively working with public and private sector partners throughout the region and with some of the top universities in the world.

Recognized for its multinational, multi-cultural ethos, the Institute operates as a self-contained international community at its campus located 40 km north of Bangkok, Thailand. During your studies at AIT, you will meet fellow students from more than 40 countries around the globe.

Besides the usual labs and academic buildings, the main campus includes housing, sports, and medical facilities, a conference center, and a library with over 230,000 volumes and 830 print and on-line periodicals. All serve to fulfill the AIT mission to develop highly qualified and committed professionals who play leading roles in the region’s sustainable development and its integration into the global economy.
